NL-30

The manually operated NL-30 heat seal press is very user-friendly. Place an emblem or transfer on the lower platen and close the press. When sealing is completed, the machine opens automatically and the swivel arm turns away. This makes the operation of the NL-30 not only simple but also ensures work is done quickly and efficiently.

The clever electronics of the NL-30 make it easy to enter data. Heating time and temperature can be adjusted in a moment. With the option of storing five different settings in memory, switching from Flextrans to Truflex for example, is done quickly and efficiently. The NL-30 also has a counter to keep track of the number of press cycles.

NL-30	
Power supply (Volt)	230
Energy consumption during heating up (Watt)	2500
Temperature adjustable up to	220 ° C (+/- 1%)
Height (opened, mm)	674
Width (mm)	569
Depth (with connections, mm)	947
Weight (Kilogram)	80
Shipping weight (Kilogram)	104
Dimensions of press cushion (mm)	400 x 500
Fuses 2 x	T 16A 250 V
A-weighted sound pressure	<70 dB (A)
Certification	CE
