Woven emblems

Woven emblems are a striking product within the extensive range of Thermpatch. Available in various shapes, these emblems have a beautiful “look & feel” thanks to laser-cut technology and a raised, embroidered border. In addition, this emblem is both flexible and durable.

The colour palette of this type of emblem contains no less than 470 colours. Per design images of up to 8 different colours are possible. The result is a product with sharp details and a high quality appearance.

Woven emblems are available with two types of adhesive: for a high or low processing temperature.

Woven emblems (low temperature)	
Woven emblems (high temperature)
