

## BARCODE LABELS

Print while you sleep!

Highlights • Perfectly readable • Print them yourselves • Makes garment tracking simple

### Barcode labels

Alongside the use of transponders (RFID chips) barcodes offer a cost effective way of garment tracking.

In the laundry industry 2 of 5 interleaved is the standard. This code is numeric only and can easily be recognised by any scanner. Most used are the 8 digit length barcodes.

Thermopatch offers preprinted barcodes that can be ordered in a wide range of sizes and designs depending on the selected media.

You can also make your own labels on demand with one of our label printing systems.

### Plytex® barcodes

These barcodes are printed with dot matrix technology on Plytex® label material.

### Other symbologies

If you use Data matrix or QR, we can print that for you as well. Both codes are getting more and more in use due to the higher information density.

### Label printing software

Thermopatch is proud to be the reseller for textile applications of Seagull scientific's BarTender software. BarTender is the ultimate label printing program around and with over 1 million copies sold it will offer you what you expect and more.

### Make Your Mark

This program is a development of Thermopatch and for small and medium users it offers it all with a very no nonsense user interface.

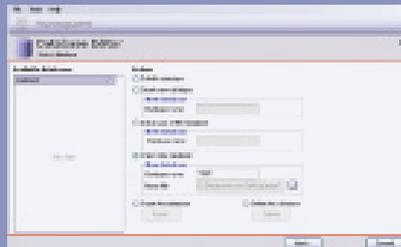

### HiQ barcodes

With the HiQ system it is very easy to make your own barcode labels based on Thermal transfer printing technique.

Alternately, we can make them for you. HiQ barcodes are supplied on a roll with perforation.

### Mediron barcodes

Are you looking for a thin supple label that can be used on sheets and other flat work items? Please have look at our Mediron

media. Also this material can be pre-printed with barcodes or other symbologies.
