

HIGHCREST

Highlights • stunning 3D appearance • luxurious look • high resolution designs • 100% PVC free • optional blocker for application on sublimated items

Highcrest

Want the most advanced printing techniques combined with the best modern materials? Thermopatch's Highcrest is a 3D identity product of unprecedented class and quality.

Luxurious look

Highcrest offers precise detailing and is suitable for high resolution designs. It gives promotional textiles, sportswear and apparel, a rich and luxurious look. In addition to the stunning 3D appearance, a hatching effect can also be applied, giving the design an extra dynamic.

Both emblem and transfer

The product can be considered as both an emblem and a transfer. This is because a design can include free-standing elements thanks to a carrier foil (cold-peel). Highcrest is 100% PVC free, whilst an optional Subli blocker provides protection against colour bleeding.

The application of Highcrest is simple:

- Place the garment on a heat seal press
- Position the Highcrest product
- Cover with double layer of thin textile
- Seal for 20 seconds at 160°C with medium pressure
- After sealing remove double layer textile
- Allow to fully cool down, then remove protective foil

Highcrest can be washed at 40 °C.

Pantone® colours

Choose from the extensive Pantone® PMS Formula Guide colour system to create the correct colour composition for your image or logo. Before production is started, a digital impression of each design will be presented for approval.
