NL-40

Heat seal press for ball and cap

Highlights • multifunctional • exchangeable platens • for caps and balls

NL-40 heat seal press
The NL-40 is a hand operated heat seal press that opens automatically after the sealing cycle is completed. The NL-40, as base unit, can be converted into a ball heat seal press with the round shaped element. Or as a cap sealer, when the cap unit is installed. Both units are supplied separately and can be mounted in an instance without any tools required.

Electronics
The electronics are developed to make it very easy to set the required parameters like sealing time and temperature.
