Thermopatch
an Avery Dennison Company

REPAIR PATCHES

Only twelve seconds and the job is done!

Highlights • More than 100 different fabrics • A wide variety of roll and patch sizes • Cost effective

Repairing textile fabrics is a cost effective way of extending the life time of a garment or textiles.

A special glue layer on the back of the patch is heated under pressure and creates a firm fixation between both fabrics.

Our thermoplastic coating is produced by a unique technology, resulting in a very thin, smooth layer.

Select from our colour card the fabric that fits your need or have your own fabric coated and converted into patches.

Thermopatch repair materials are supplied both on rolls and as pre-cut patches. Among our ranges of more than 100 different fabrics and 27 patch sizes, you'll always find the material you need.
