REFLECTIVE EMBLEMS PLOTTER TRANSFERS

High quality reflective material

Highlights • Enhances garment safety • Makes your logo stand out • Meets with the EN-471 standard regulations

As safety has become a much greater issue in career and work wear design, reflective material has assumed more importance and with it the need for reflective emblems and plotter transfers. These products are particularly suited for those who work at night or in poor visibility like emergency services and maintenance engineers.

We can plot a wide range of reflective logos in a variety of shapes and sizes.

Furthermore, a special technique was developed to print emblems on this reflective surface. These high definition images in strong colours on a reflective background will certainly attract attention!

Reflective plotter transfers are also available in flame retardant, well suited for application to textile with similar flame retardant requirements.

The flame retardant plotter transfers meet the EN-469 standard.
