Thermopatch
an Avery Dennison Company

TEXTRA

High-tech and colorful

Highlights • Deep colors • Sharp details • Applicable to various textiles

The latest innovation of Thermopatch is Textra. A transfer based on years of experience in heat sealing combined with the latest digital printing techniques. A smart production process with modern inks give Textra a high quality and appearance thanks to its deep colors. Another additional advantage is a shorter delivery time and a sharp price.

Application
Textra is supplied as hot peel transfer and is washable to 95°C. This transfer should be pressed at 195-165°C for 15 seconds.

Textra Sport
Textra Sport has almost the same features as Textra. Great advantage of this heat transfer however is the stretch ability. With high print quality and durability it is an ideal product for supple fabrics such as sportswear. Available in any size and shape and very intense colors.

Application
Textra Sport also has a hot peel and is washable to 60°C. Press advice is 15 seconds at 140-160 °C. Due to the lower temperature during sealing the transfer is applicable for many different textiles.

Both Textra and Textra Sport are available as full colour transfers, not in PMS colors. A great advantage of these transfers is a shorter delivery time and a sharp price.

Textra and Textra Sport are also available with sublimation blocker.

Textra is also available in a flame-retardant version.
