

HS4E

This heater heats up faster than any other heat-seal on the market, under 4 minutes and now will hold its temperature within a tighter range (5 degrees)

Platens

The hs4e comes standard with a 4" x 5" platen. The platen can easily be raised or lowered to help create the optimal pressure for various thicknesses of garments. Thermopatch also manufactures optional sizes of platens, these are ideal for smaller labels where you can match the size of the platen to the size of the label.

Model

The hs4e is an automatically opening heat-seal. This feature enables the worker to do other functions while the label is sealing without the worry of leaving the heat platen on the material any longer than the pre-set time cycle.
