Plytex

Plytex offers an added feature over our standard dot matrix labels, a self-adhesive backing. Simply peel and stick Plytex where you want it and then heat-seal it on permanently. This makes heat-sealing areas such as a tag in a garment that can move after placing a standard label on it, easy. Plytex has the same durability as our TJ labels that can withstand industrial laundering and still be readable.

For ease of label printing try our Titan label writer software and the Epson LQ-570 dot matrix printer. This is a proven combination. Plytex can also be pre-printed with your color logo for added enhancement and brand recognition. We work with special silk screen dyes that are fully resistant to industrial washings.
