

Thermoset III

The Thermoset III is loaded with safety features, in fact, it has more standard safety features than any other heat-seal on the market!

Safety Features:

- Full circuitry touch sensitive safety bar with automatic shutdown.
- Two hand activation.
- Bumper guards around all platens.
- Plexiglass guard, covers pinch point between the upper platen and hood.
- Emergency stop button.
- Electronic fuse mounted under front panel for accessibility.

Take the worry out of high volume heat-sealing and create a safer, stress free work area when using the Thermoset III. Besides all these safety features you also get digital readouts, upper and lower heat, air/temperature auto shutdown and timer lockout and a full cycle piece counter.

Also when it comes to maintainance, the fully removable back makes it simple to work around in the machine. Plus the majority of parts are straight off the shelf. Having said that, the Thermoset III is a quality, highly durable machine and will last for many years to come.

The Thermoset III can be ordered with a 2-1/4"x4", 3"x4" or 4"x6" platens. Also optional are a foot pedal or with Pro-Con.

What is Pro-Con?

Pro-Con replaces the manual set timer with a sensor that automatically detects material temperature and adjusts the dwell time to give an optimal heat-seal every time. Some materials heat up faster than others causing the adhesive to flow quicker into the fabrics, while other thicker materials absorb the heat and take longer to make the adhesive flow. With Pro-Con you don't have to manually adjust the timer for various thicknesses of materials, it senses it automatically and adjusts the dwell time.

Innovation at its finest!
