Truflex / Flextrans

Truflex transfer is perfect for garments that go through tough washes. Flextrans is designed to stretch more with the garment. Truflex FR has flame retardant qualities in the adhesive. PMS color matching is also available with all of these processes. Once heat-sealed, these warm peel transfers cannot be removed and will not fade.

Truflex and Flextrans are supplied precut on a clear carrier making it easy to place the design on the garment for heat-sealing. This transfers should be cleaned in a domestic wash at a maximum temperature of 140°F. Applied at a lower temperature, the Truflex transfer is perfect for garments that may be sensitive to high heat. Once heat-sealed, these cold peel transfers cannot be removed and will not fade. It’s ideal for the identification of sportswear, lycra garments and various other fabrics with a stretch. It is equally suitable for promotional garments such as sweat-, polo- and T-shirts.

Minimum order quantity is 25 pieces, orders above 25 must be ordered in multiples of 25. Normal ship date is 10 working days from artwork approval. Extremely large orders and/or multiple colors can add to required production time. If this is the case, Thermopatch will contact the customer with anticipated ship date.
