

A4+300 Series

HiQ
Thermal printer

Highlights

- 300 DPI Printhead
- High Speed Printing
- User Friendly
- Easy Maintenance
- Many Options available
- 2 Year Warranty

Thermopatch's a4+300 series Thermal Transfer printers are one of a kind. When you buy an a4+300 series printer you have three options, clean cutter (a4-2), perforation cutter (a4-3) or the standard (a4-1) sensor gap reader.

The standard a4-1 prints the fastest (400+ labels per minute) utilizing the printer's sensor and a variety of **HiQ** pre perforated size rolls.

The clean and perforation cutter prints slower but incorporates the smart cut system; this gives the user the flexibility to customize their label size at their facility. This represents a significant savings because there is no down time switching between two or three different size labels. The clean cutter cuts a **HiQ** label so it drops into a tray and the perforation cutter cuts a **HiQ** label but leaves it attached to the roll with perforations.

All three will print an industrial label and/or a Cleanroom label that will hold up through the most rigorous wash cycles.

The **a4+300** series printers are available in a system (**HiQa4-1, -2 or -3**) with a computer, label printing software, monitor and keyboard or by itself to be used with your computer system.

Thermopatch offer's a complete line of Windows based **label printing software** programs. Our sales and customers service departments are standing by to help you discuss your computer and software needs.

Highlights

- High Speed Printing
- Correct amount of ink used every time
- Many Sizes available
- High Quality
- Very Durable

HiQ Quality

Thermopatch's HiQ soft, strong thermal labels have been developed to give the adhesion required for the industrial laundry and dry cleaning industries. The combination of the labels and ink are extremely important part of this system.

Not only does the HiQ have a white adhesive, but also has been manufactured thick enough to block out dark colors and stripes that may affect bar code printing.

We also realize that all fabrics are not as smooth as the next, so with that in mind HiQ is ideal for bar coding textured (ribbed) garments because it will seal smooth on top of those fabrics.

Each package is supplied with thermal ink included.

HiQ Label Types

Perforated tape (TT) utilizes sensors in the thermal printer for high-speed printing. Continuous tape (TU) is cut by the printer to whatever size you choose. IniTex tape (TI) is similar to TU tape, but once adhered you cannot remove it! However you can heat-seal another label over it. Hytex (HY) also uses the sensor, but is on a paper carrier and has a self-adhesive backing, making placement of the Hytex label very easy.

All HiQ labels are supplied in various size configurations. For more information on size and quantity discounts please see our price sheet or speak directly with a Thermopatch specialist.
