

EOS Series
HiQ
Thermal printer

The new EOS series combines all functions of a solid industrial printer with highest ease of operation.

The key feature of the new EOS is that it is the first label printer to be fitted with a touch screen as standard. This makes it easy to call up existing labels, add data and print them off – all without being connected to a PC. Complete labels can be saved to a USB memory stick or the internal memory of the EOS printer.

All labels are centered automatically in the printer and have 203 dpi resolution. What’s more, wear parts can be replaced in a matter of seconds – usually without the need for any tools.

There are two versions available of the EOS printer, the EOS-1 that utilizes a sensor, the EOS-2 (shown above) equipped with a clean cutter.

Two additional USB interfaces are located below the LCD display to connect a standard PC keyboard, a scanner or an USB memory stick.

In stand-alone mode the label data is entered via keyboard directly into the printer. A PC is not necessary any more.

With the high-tech electronics, the intelligent printhead and efficient power supply the EOS is particularly energy efficient and environmentally friendly.

Thermopatch offers a complete line of Windows based **label printing software** programs. Our Sales and Customers Service Departments are standing by to help you choose your computer and software needs.

Highlights

- High Speed Printing
- Correct amount of ink used every time
- Many Sizes available
- High Quality
- Very Durable

HiQ Quality

Thermopatch's HiQ soft, strong thermal labels have been developed to give the adhesion required for the industrial laundry and dry cleaning industries. The combination of the labels and ink are extremely important part of this system.

The HiQ media has been manufactured thick enough to help block out dark colors and stripes that may affect bar code printing.

We also realize that all fabrics are not as smooth as the next; with that in mind HiQ is ideal for bar coding textured (ribbed) garments because it seals smoothly on top of those fabrics.

HiQ Label Types

All HiQ labels are supplied in various sizes and configurations. For more information on size and quantity discounts please see our price sheet or speak directly with a Thermopatch specialist.

TT – Perforated tape, utilizes sensors for high speed printing

TU – Continuous tape is cut by the printer to whatever size you choose.

TI – IniTex tape is similar to TU tape, once adhered you cannot remove it. However you can heat-seal another label over it.

HY – Hytex tape also uses the sensor, is on a paper carrier and has a self-adhesive backing, making the placement of the label very easy.

TD – Thermo-Trans tape, thermal print your own care transfers

TZ – Continuous tape without heat-seal adhesive, made to be sewn on.
