

# THERMO-TRANS – A COMPLETE TAGLESS TRANSFER SYSTEM!

Create your own, single color, labels on demand with our Thermo Trans system. The complete system consists of a printer, label making software, TD2000-01 transfer media and thermal ink.

## HOW IT ALL WORKS TOGETHER

Load the TD media and ink onto the printer. Guides help position the media in the printer for easy loading. Next, design your transfer in the label software. You can choose the height of each transfer, add as many lines of text, numbers, barcodes and logos that will fit the height that you choose, then select print. Once the transfer is done printing, simply heat seal the transfer onto the garment!

No more ordering a minimum quantity of transfers, print one, two or as many as you like each time. It's that simple!

## HIGHLIGHTS

- Print your own labels on demand
- Cost effective
