Description of job.  
XX Yds of XX Material returned on RMA #  
(Instructions for cutting/slitting)

**PO #** \_\_\_\_\_

**Quoted Price** \_\_\_\_\_

**CUSTOM LAMINATION AGREEMENT**

Thermopatch recognizes our customers need to have mending patches for a broader range of materials than is feasible for us to stock. As a solution to this problem, Thermopatch will laminate and/or die cut or slit customer supplied material into any standard size patch/roll that is currently supplied on our standard mending (R1) chart.

Since orders will be entered for each shipment upon receipt, **we require the customer to obtain an RMA from our customer service department prior to returning material and a signed custom lamination agreement must be on file for each job before production can commence.** RMA # must be clearly marked on the outside of the submitted package and returned to us via freight prepaid. Workable material must be equal to a minimum of 10 linear yards (LY) **per material**. There is a minimum order of \$50.00 on all custom laminating jobs/orders. Invoices must be paid within our regular terms to be eligible for quoted pricing.

Yields are dependent on the properties of the material submitted for lamination and are estimates only. Upon receipt, goods will be inspected and measured and revised agreement will be sent if discrepancies occur before job can be processed by production.

Jobs/Materials requiring hand separation must be noted accordingly and are subject to an additional processing/handling charge of \$21/Linear Yard.

I have read and acknowledge understanding of the terms described above and agree to participate accordingly.
