

HIGHLIGHTS

- Digital Readouts and Controls
- Touch Guard
- Top and Bottom Heat
- Wide-Open Work Area
- Daily and Continuous Counters
- Ease of Operation

HS11

Mid-Range Heat Seal

Work horse

QUALITY

The HS11 is more than ready to face today's high production environments. It incorporates top and bottom heat, the latest safety features, and digital controls along with daily and continuous counters and upgraded electronics. Ease of operation and Thermopatch's quality is, of course, built in.

The HS11 is a heat-seal built to last. Standard features include 5" x 6" platens, electronic heat controls, touch guard and a wide-open work area.

At proper air pressure, the HS11 generates greater inter-platen pressure than any other bench model heat seal machine. The result... less label loss!

Platens

The upper and lower platens can be easily reversed to apply merrowed or embroidered emblems.

The HS11 is ideal for any situation and it is air operated so you know you are always getting the correct amount of pressure.

Priced to be a mid-range heat seal, built to last!
