

## HIGHLIGHTS

- Digital Readouts and Controls
- Energy Saving Feature (Sleep Mode)
- No Compressed Air Required
- Compact and Lightweight
- Adjustable Pressure
- Durable Heater Assembly
- Heats Up in Under 4 Minutes

## HS3E/HS4E Compact Heat Seal

*Energy saver*

### DURABLE

A compact, hand-operated heat seal press ideal for sealing labels, property mark transfers and mending textiles in a small to medium volume requirement.

The HS3E/HS4E has many features included, digital readouts, adjustable pressure, energy saver mode and a heater that heats up faster than any other heat seal on the market. It takes less than 4 minutes from the moment you turn on this heat seal and it's ready to be use. The heater also holds a tighter range of temperature, within 5 degrees of the set temperature.

### Platens

The HS3E and HS4E come standard with a 4" x 5" platen. The lower platen can easily be raised or lowered to help create the optimal pressure for various thicknesses of garments.

### Options

Thermopatch also manufactures optional sizes of lower platens, these are ideal for smaller labels, so you can match the size of the platen to the size of the label.

### HS3E and HS4E

The HS3E is a manually opening heat seal and makes a beeping sound when the time cycle is finished. Simply lift the handle up when the sound is heard.

The HS4E is an automatically opening heat seal. This feature enables the user to do other functions while the label is sealing without the worry of leaving the heat platen on the material any longer than the pre-set time cycle.
