

HIGHLIGHTS

- High Speed Printing
- Correct amount of ink used every time
- Many Sizes available
- High Quality
- Dye Resistant Finish
- Made in the U.S.A.

HiQ Thermal label

High Quality Labels

HIQ QUALITY

Thermopatch's HiQ soft, durable thermal labels have been developed to give the adhesion required for the industrial laundry and dry cleaning industries. The combination of the labels and ink are extremely important part of this system.

We realize that all fabrics are not as smooth as the next, so with that in mind HiQ is ideal for bar coding textured (ribbed) garments because it will seal smooth on top of those fabrics. The HiQ label is also manufactured thick enough to block out dark colors and stripes that may affect bar code scanning.

HiQ Extra

The top coat has an added element that helps resist dyes from materials, keeping the label clear and readable throughout multiple washings.

HiQ Options

There are three variations of our HiQ, (TC) perforated, (TH) continuous roll or (HT) perforated with a self-adhesive backing. The TC and TH are available in both white or yellow. Black is the standard ink color, red and blue are also an option.

Packaged

Each standard package contains two 50 yard rolls and one 110 yard ink ribbon. We do have an option with four 25 yard rolls to accommodate smaller thermal printers.
